

AP Chemistry Summer Assignment

AP Chemistry is a course that covers a large volume of material. In order to have more time for problems and labs during the school year it's necessary to cover these topics during the summer:

Matter and Change

Atomic Structure

Electrons

Nomenclature

All notes and electronic copies of problem sets and worksheets will be found on Google Classroom. The problem sets are to be completed while viewing the power points, and the worksheets after finishing each PowerPoint. The class code is:

rgaumc

You will also be provided a packet that includes all problem sets and worksheets.

Start at the bottom of the stream in Google Classroom and complete each problem set and worksheet on the hard copy. These must be turned in the *first day* of AP Chemistry.

You will have a test on these topics the *second day* of AP Chemistry.

Sign out a copy of the textbook before you leave for the summer:

Chemistry: The Central Science (Brown, LeMay and Bursten)
